

Too painful to bend the knee? Start with the ankle.

CPM FLEXIEE 2.2

KNEE ROM -10°~150°, ANKLE ROM 60°~0°~40°

- ▶ FLEXIEE 2.2 is a lower-limb rehabilitation device designed to deliver passive motion to the knee and ankle joints—either independently or simultaneously.
- ▶ In cases where severe knee pain limits mobility, the device allows ankle-only motion to initiate early-stage rehabilitation, promoting patient comfort and faster recovery.

Move Better. Heal Faster.

Benefits

- Exceptional Patient Satisfaction
- Custom-contoured Design for Personalized Comfort
- Fits Every Patient - Adjustable Ankle Plate with Precision Control (Vertical and Horizontal Directions)
- Compact Size, Maximum Performance

Features

- Extended Range of Motion — Up to 150° Knee Flexion
- Independent & Synchronized Knee-Ankle Motion
- Side-to-Side Adjustable Ankle Plate
- Multiple Therapy Modes Available (Normal/Vibration/Progress/Limited Pause)
- Accessible One-Hand Controller
